## M8 wilden pump oem manual

H1500 - 76 mm (3) Saniflo HS Pump 16 pages The Wilden membrane pump series is supported by a range of accessories that complement the functionally operated membrane pump. Wilden's accessories increase their fluid process and expand the range of applications of Wilden membrane pumps by increasing the performance and/or benefit of the pump. Our electronic controls automate your Wild Pump for batches and other electronically controlled dosing applications. We can also generate a laminar process flow by eliminating pump pulsation or controlling the fluid level within a process system. SD EQUALIZER® SURGE DAMPENER An inherent feature of lifting pumps is the pressure change between each pump stroke. The equalizer® can be used to provide an additional pumping effect between pump hubs, minimizing pressure fluctuations while protecting your pumping system. The equalizer® reduces the water hammer, absorbs the acceleration head, reduces the maintenance costs of the system and minimizes the protection of pipe expansions in line systems. Available sizes are SD1.2 13 mm inlet/discharge, SD1 25 mm (1) inlet/discharge, SD2 51 mm (2) inlet/discharge and SD3 76 mm (3) inlet/discharge. The inherent properties of the Wilden air-operated pump and Accu-Flo™ pump technology make it possible to distinguish itself as a utilitarian drum pump. Different speed and printing ability, the ability to run dry, self-prime and dead head gives you flexibility at low cost. The Wilden Universal Drum Pump Kit enables wild 1/4 and 1/2 pumps to directly adapt to drums for cost-effective, efficient fluid transfer. Universal kit for 6 mm (1/4) and 13 mm (1/2) pumps Suitable 51 mm (2) NPT bungholes pipe length can be cut to length Diverse materials are available The Wil-Gard™ detects membrane failure at source: the primary membrane, not at the air chamber or the air duct like other systems. Sensors are located between the primary and back-up membranes (containment). When the sensors detect a conductive liquid, an acoustic alarm, an LED and an internal locking relay are activated. Increase containment, reduce volatile emissions, and reduce downtime with 24-hour pump monitoring. Power requirement: 110V AC, 220V AC or 9V DC battery WILDEN PUMP CYCLE MONITOR The PCMI counts pump cycles by detecting the presence of the air valve piston (turbo-flo™) or the air valve coil (Pro-Flo™). The sensor, which is located on the air valve and cap, detects the presence of a magnet at the end of the air valve piston/coil The PCMI registers a complete pump cycle when the piston/coil moves away from the sensor and then returns to its original position. The has a reset switch on the surface of the PCMI module. PCMI can be reset from a remote site. Features ADS: Pro-Flo® Shift, Pro-Flo®, Pro-Flo X™, Turbo-Flo, Accu-Flo™ Anti-Freezing Technology Large SolidS Passage Portable & Submersible Screen Base Options Multiple Liquid Connections Lubrication-free options Performance data Sizes: 6 mm (1/4) to 102 mm (4) Max flow rate: 1211 lpm (320 gpm) Max suction lift: 9.5 m (31.2) wet, 7.6 m (25.0) dryMax. Disp. per stroke: 4.73 L (1.25 gal) Max discharge pressure: 8.6 bar (125 psig) Max solid pass: 35 mm (1-3/8) Properties ADS: Pro-Flo® SHIFT, Pro-® Flo, Pro-Flo X™, Accu-Flo™ All metal screws Higher flow rates Higher flow rates Superior containment Anti-freeze technology Submersible BSPT (NPT) or DIN (ANSI) Liquid connections available Lubrication-free operation Performance data Sizes: 6 mm (1/4) to 76 mm (3) Max. Flow rates: 1021 lpm (270 gpm) Max. 9.5 m (31.26) Wet, 7.6 m (25.0 inches), Dry Max disp. per stroke: 6.09 L (1.61 gal) Max discharge pressure: 20.6 bar (300 psig) Max size solids: 76 mm (3) Features Pro-Flo®, Pro-Flo X™ and Accu-Flo ADS™ available For sanitary applications Multiple sanitary FDA elastomers available Scissors-sensitive intrinsically safe options Certifications: FDA, CE, ATEXTEX Performance Data Max. Flow rates: 920 lpm (243 gpm) Max suction lift: 7.6 m (25.0') Dry, 9.5 m (31.2) Wet max size Solids: 9.5 mm (3/8) Sizes available: 13 mm (1/2) to 76 mm (3) 316 stainless steel wetted components Tri-Clamp™ Style Connectors ATEX Certified Specialist Mining Pumps Following are a wide range of installation, engineering and maintenance manuals for Wild Membrane Pumps. These can help you order the spare parts you need and help you with any installation and troubleshooting that you can encounter. All Wild Repair Kits contain real Wild Parts. Standard T8-series repair kits for 2-inch metal pumps include: membranes, valve balls, valve seats, seals, and corrugated rings. Standard repair kits for 2-inch T8 PTFE metal pumps include: membranes, valve balls, valve seat O-rings, seals, and corrugated rings. Improved T8 kits contain additional listed parts as shown in the selection menu. This T8 kit also repairs the Wilden M8 pump. Wild pump elastomer material selection instructions for rubber membranes, choose Buna or neoprene. Buna membranes are usually used for pumping heating oils, engine oils, kerosene and most petroleum-based products. If the membranes are black with a red dot and encoded with a 52, then they are Buna. Neoprene membranes are typically used for most water-based applications and non-corrosive/aggressive chemicals. If the membranes are black with a green dot and with a 51 encoded, then the membranes are neoprene. For thermoplastic (TPE) membranes, choose Wilflex or PTFE: Wilflex membranes are typically used for corrosive and acidic applications and have been proven to deliver high performance in a variety of grinding solutions. If the membranes are cream-coloured and encoded with a 58, then the Wilflex. PTFE membranes are the versatile choice that work in almost any application when the above selections are not compatible. If the are white, rigid, have circular lines (such as tree rings) and are encoded with a 55, then the membranes are PTFE. If the pump is PTFE mounted, a PTFE repair kit or an improved repair kit is recommended. Valve seat material selection guidance At least half of the valve problems that processors have may be due to incorrect selection of valves and valve seats. As valve seats wear out over time, a preventive maintenance program is recommended to replace valve seats every other time the membranes and/or valve balls are replaced. If you avoid replacing your valve seats, you will usually find the valve balls that are stuck in the valve seats, which prevents the pump from pumping. Downtime costs far more than new valve seats. If the pump is equipped with aluminum and PTFE, then choose the kits either with the aluminum valve seats or for more durability, upgrade to the stainless steel. If the pump is mounted in stainless steel and PTFE, select only the stainless steel seats. If the pump is polypropylene, choose from the kits with the polypropylene valve seat upgrade or the PVDF valve seat upgrade. PVDF provides additional strength, density and hardness for a longer service life. If the pump is PVDF, select the kit with the PVDF valve seat upgrade. Note: Standard repair kits for Wild Plastic Pumps do not include valve seats. How to know when pump shaft or air valve is needed When a pump membrane breaks, the solution moves from the liquid side of the pump through the air part of the pump to where the shaft and the air valve unit are located. This is a fire alarm caliber problem! If the solution comes into contact with the pump shaft, then it will probably attack the shaft and start causing problems. If the shaft has been attacked and needs to be replaced, then it is very likely that the air valve will also need to be replaced. If the pump will already be out of service to replace the shaft, then go ahead and replace the air valve at the same time, much easier and cheaper than another pump failure. Description: Wild 2-inch T8 series Metal Pump Kits feature real Wild Parts. Choose the standard repair kit with membranes, valve seats, valve balls, valve seat O-rings and more, or choose a range of upgrades for superior performance and longer service life. For free instructions on choosing the ideal kit, calling or chatting! Note: For kit clarification, please call or chat! Lead time: 3-4 business days from CT. For emergencies please call us at 203-740-1877.
